Executive Summary

The deliverable D4.2 is a deliverable of work package 4 “Dissemination and exploitation” and is related to the task T4.2 “Communication through traditional media”. The main objective of this deliverable is to show that the project logo and project website has been set up. The website will be used as the primary point of online dissemination of the project activities and the results that will be generated during the project.

1. Project logo

The project logo is designed by the coordinator (University of Ghent) and is shown in Figure 1. The logo depicts the three pilot cases, 1) cardiovascular monitoring, 2) remote consultation of patients, and 3) mobility disorder patient monitoring, that will be designed and prototyped during the project. The logo also shows the incorporation of machine learning and artificial intelligence that will be thoroughly used in the pilot cases. This logo will be used for branding the project and disseminating the project results.

2. Project website

The Digihealth-Asia project website is prepared by the coordinator (University of Ghent). The website is available at the following address:

www.digihealth-asia.eu

The website has been developed by using WordPress which is a free and open-source content management written in PHP and paired with a MySQL or MariaDB database. The website is built upon the Interstellar RocketTheme [1].

The website is used for disseminating the project activities and associated publishable outcomes throughout the project duration. All partners contributions related to the pilot cases and publishable results will be made visible on the project website. Academic and industrial people can look at the content related to the pilot cases and publications and can easily reach out the concerned partners.

The website comprises of the following pages: home, consortium, deliverables, news and events, and pilot cases and is shown in Figure 2. The home page depicts general information about the project and includes the main objectives. The consortium page includes all the partners from the EU and Asia. The deliverable page includes the complete list of deliverables that will be written during the project and will be made publicly accessible on the website. The news and events page contains latest news about the project activities including the progress on the pilot cases, events, meetings, publications, presentations, workshops, etc. The pilot cases page lists down the three pilot cases will be developed and prototyped during the project.

2.1. Future modifications

As the project evolves, the following modifications will be done to the website in future:

- The deliverables will be made public on the website after being submitted and approved by the agency.
- Detailed information about the pilot cases in terms of their design, development and implementation will be made available.
- Two sections will be made: a) external and b) internal. The external section will be used for external dissemination and will be accessible publicly. The internal section will be used for project internal communication.

- The news and events page will be continuously updated with the information regarding project meetings, status of the pilot cases, publications, workshops, newsletters, etc.
- Information regarding project-oriented courses (including course outline, courses names, use of the pilot cases in the courses, etc.) that will be launched at the Universities of the Asian countries will be made available.
